Television Information

TELEVISION SYSTEM DATA CCIR 625-LINE SYSTEM-I WITH PAL COLOUR

The following frequency bands are used for television transmissions:-

BAND III	174 - 254 MHz	SOUND carrier -13dB relative to VISION carrier
BAND IV	470 - 598 MHz	
BAND V	599 - 860 MHz	

RECEIVER INTERMEDIATE FREQUENCIES

Channel assignments to transmitting stations have been planned assuming the use of 38,9 MHz as the television receiver vision intermediate frequency and 32,9 MHz for sound intermediate frequency. In all cases the sound carrier frequency is nominally 6MHz higher than the vision carrier frequency.
The NICAM sound carrier is 6,552 MHz higher than the vision carrier frequency.
